

EXPERTS | 2019

HNTB expert:

Laddie Irion

National Aviation Market Sector Leader

Senior Vice President

HNTB Corporation

lirion@hntb.com

“Airports’ traditional sources of funding – bond issuance, federal funding and passenger fees – are vulnerable to slow growth or even declines. We need to identify a permanent funding mechanism for improving airport facilities.”

Laddie Irion serves as national aviation market sector leader and senior vice president. He has worked on more than 100 aviation and airport projects in the United States and abroad. He served as principal-in-charge on a number of projects associated with large-scale airport expansion programs, including work in Orlando, Tampa, Dallas, Phoenix, San Francisco, Los Angeles and Washington, D.C.

Irion works closely with HNTB leadership and aviation professionals to broaden the range of value-based services that HNTB provides aviation clients. The firm’s many signature aviation projects include design of the “Green Build” expansion at San Diego International Airport; engineering and design services at Los Angeles World Airports; design and construction management of runway status light implementation at airports across the country; and design of the runway expansion at Fort Lauderdale-Hollywood International Airport.

Additionally, he can speak on a wide variety of issues directly affecting the nation’s and states’ aviation systems, including:

- **NextGen**

Short for Next Generation Air Transportation System, NextGen will be a major component of future U.S. aviation infrastructure improvements. It has the potential to make modern air travel safer, more secure and more reliable.

- **Airport funding**

The United States needs to identify a permanent funding mechanism for airport operations and upkeep. One important industry trend includes increased consideration of public-private partnerships, or P3s, for airport development programs. P3s offer a promising solution to airport funding by combining public and private capital to deliver programs sooner than traditional funding mechanisms.

- **Environmental sustainability**

Strategic investment in efficient and sustainable materials and approaches is wise. Many sustainability best practices can help airports grow a green bottom line as well as address energy efficiency.

- **Airport planning**

Before the first plane lands at a new or expanded airport, years of preparation and planning must take place, including environmental impact statements, airport noise and land use compatibility, and funding and financing.

Education

Bachelor of Arts, University of South Florida,
Tampa

Supplemental Studies in computer science,
environmental engineering and transportation
modeling

Professional affiliations

Chair, ACI-NA World Business Partners/Associates
Board of Directors, 2018

Board of directors, Airport Council International-
North America; World Business
Partners/Associates Board, 2014-2017

Active in leadership positions in a number of industry
associations and organizations, including American
Association of Airport Executives, Airport Consultants
Council, and Aero Club of Washington.

Board member, ACI-NA World Business
Partners/Associates Board, 2015, 2016

Board member, AAE Corporate Committee, 2016
